

Acetaminophen Injection

1000 mg/100 mL (10 mg/mL)

VIAL HANGING INSTRUCTIONS

The Acetaminophen Injection vial incorporates an embedded ready-to-hang label.

STEP 1

Locate the perforation at the bottom portion of the vial label. The perforation is a semicircle cut on the bottom of the label that becomes the vial hanger.

STEP 2

Gently detach only the perforated portion of the label (**Note:** Do not cut the perforation with a sharp object). Pull back this section from the vial label ensuring no damage to the non-perforated section, until it creates a hanger.

STEP 3

Carefully hang the vial.
